

AQUA **2** LIVE

The importance of water

Water is essential for human beings to survive on Earth. We can live without food for several weeks, but we can only stay alive without water for a few days. Not only the availability of water is important, but the quality of the water also is crucial for man, animal and plant to survive.

Swimming pools

Anyone who owns a swimming pool knows that it takes a lot of effort to maintain it. You have to keep it clean, check the chlorine and PH-value. With Aqua2live, these tasks would no longer be necessary. Aqua2live can be connected to any water supply system. In addition, Aqua2live does these checks automatic.

Aqua2live is invaluable for hospitals, sauna suppliers and sports facilities. Aqua2live can process up to 5000 litres of water within one hour. In eight hours, a medium-sized swimming pool would be free of micro-organisms, bacteria and bad odours.

No Legionella

Four out of ten communities around the world are not taking the necessary steps to stop the deadly Legionella bacteria that spread from cooling towers in a city.

(Source: De Telegraaf, June 22, 2008)

Endless applications

- Always clean, inodorous drinking water
- Always free from bacteria, inodorous swimming pool water
- Showers always free from Legionella bacteria
- Air conditioning systems free from Legionella bacteria
- Bio-Industry always free from bacteria

Successful tests

Trial runs of the Aqua2live prototypes have proven successful for several years. The Aqua2live water was free from bacteria and had a medicinal effect. These effects have been proved by experiment in the following ways:

- Healing of both animal and human injuries
- Reduction of eczema and psoriasis
- Provided additional drinking water to a stock of cattle

Veterinary solutions

The veterinary world is very interested in Aqua2live. They have discovered that water treated with Aqua2live has a very positive effect on the treatment of injuries and wounds found on horses and other animals.

Aqua2live removes 100 percent of the Legionella bacteria from water

Testing

The operation of Aqua2live has been tested extensively on a long-term basis in a water lab located in The Netherlands.

Testing has proven that water treated by Aqua2live is cleaner than the water that normally comes out of a tap. The only substance that has to be added to make the reactor work is raw salt.

Around the world

Aqua2live will ensure cleaner water than the tap water in your home delivered from the water companies. Due to the small size of Aqua2live, it can be used anywhere in the world at any time. This device can send an e-mail to alert customers of possible mechanical failures or any adjustments that need to be made.

Human health organisations

Worldwide almost four thousand men a day die from drinking polluted water. On a yearly basis, that adds up to 1.6 million. If governments choose not to take any action to improve the situation, that will not change.

(Source: www.nu.nl, juni 23, 2008)

Aqua2live can help doctors throughout the world to have clean water at all times.

The revolutionary Aqua2live machine.

Applications Aqua2live

Aqua2live is a revolutionary invention that offers many benefits. After extensive testing, it is now in full production. After a natural disaster, Aqua2live makes it possible to have clean drinking water anywhere in the world in a short period. Swimming pools would no longer require chlorine, shower water would be free from Legionella bacteria that could be harmful. Water from Aqua2live would be cleaner than tap water.
